AB Title acids C<sub>m</sub>R<sub>2m+10</sub>(C<sub>3</sub>F<sub>6</sub>O)<sub>n</sub>CF(CF<sub>3</sub>)CO<sub>2</sub>H [I; m = 1-8; n = 0-8] are prepared in high purity, with lower levels of HF contamination, and with lower consumption of water. The method involves: (a) hydrolysis of fluorides C<sub>m</sub>R<sub>2m+10</sub>(C<sub>3</sub>F<sub>6</sub>O)<sub>n</sub>CF(CF<sub>3</sub>)COF (II) by intensive stirring for 5-60 min with recycled aqueous phase from step d below; (b) separation into aqueous HF and I layers;

(c) extraction of the I phase with 0.1- to 2.0-fold weight of H<sub>2</sub>O; (d) phase separation

again; and (e) recycling of the step d aqueous phase to step a. Use of the method to hydrolyze 400 g of II mixture [m = 3; n = 0 (29%), 1 (49%), 2 (20%), and 3 (2% by weight)] gave as product 394 g I phase with HF content 0.1 g/L and H<sub>2</sub>O content 12%. In contrast, simple hydrolysis with H<sub>2</sub>O gave either 399 g I phase with HF 1.2 g/L and 11% H<sub>2</sub>O, or 442 g I phase with HF 1.3 g/L and 22% H<sub>2</sub>O. A large-scale example (330 kg acyl fluoride mixture) gave HF content <0.1 g/L.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Perfluoro-alkoxy propionic acid fluorides may be obtained by reacting hexafluoro-propene epoxide with a perfluoro-carboxylic fluoride in an aprotic polar solvent in the presence of a N,N,N', N'-tetrasubstituted diaminodifluoromethane as catalyst.

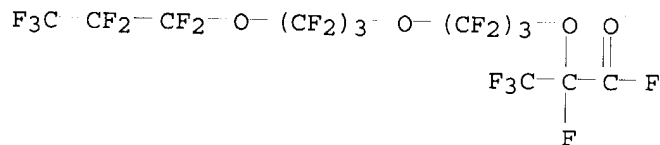

The compounds obtained may be used as starting products for valuable perfluoro ethers which are highly inert towards heat or aggressive chemicals, such as fluorine.

'BIB' IS NOT A VALID FORMAT FOR FILE 'REGISTRY'

'AB' IS NOT A VALID FORMAT FOR FILE 'REGISTRY'

'FHISTR' IS NOT A VALID FORMAT FOR FILE 'REGISTRY'

The following are valid formats:

Substance information can be displayed by requesting individual fields or predefined formats. The predefined substance formats are: (RN = CAS Registry Number)

REG - RN

10/630,698

SAM - Index Name, MF, and structure - no RN  
FIDE - All substance data, except sequence data  
IDE - FIDE, but only 50 names  
SQIDE - IDE, plus sequence data  
SQIDE3 - Same as SQIDE, but 3-letter amino acid codes are used  
SQD - Protein sequence data, includes RN  
SQD3 - Same as SQD, but 3-letter amino acid codes are used  
SQN - Protein sequence name information, includes RN  
  
CALC - Table of calculated properties  
EPROP - Table of experimental properties  
PROP - EPROP and CALC

Any CA File format may be combined with any substance format to obtain CA references citing the substance. The substance formats must be cited first. The CA File predefined formats are:

ABS -- Abstract  
APPS -- Application and Priority Information  
BIB -- CA Accession Number, plus Bibliographic Data  
CAN -- CA Accession Number  
CBIB -- CA Accession Number, plus Bibliographic Data (compressed)  
IND -- Index Data  
IPC -- International Patent Classification  
PATS -- PI, SO  
STD -- BIB, IPC, and NCL  
  
IABS -- ABS, indented, with text labels  
IBIB -- BIB, indented, with text labels  
ISTD -- STD format, indented  
  
OBIB ----- AN, plus Bibliographic Data (original)  
OIBIB ----- OBIB, indented with text labels  
  
SBIB ----- BIB, no citations  
SIBIB ----- IBIB, no citations

The ALL format gives FIDE BIB ABS IND RE, plus sequence data when it is available.

The MAX format is the same as ALL.

The IALL format is the same as ALL with BIB ABS and IND indented, with text labels.

For additional information, please consult the following help messages:

HELP DFIELDS -- To see a complete list of individual display fields.  
HELP FORMATS -- To see detailed descriptions of the predefined formats.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.  
AB Perfluorinated ethers containing carboxylic acid fluoride  
groups and optionally units derived from hexafluoropropene epoxide or  
tetrafluoroethylene epoxide are reacted with fluorine at temperatures of  
from 50° to 350°C in the presence of metallic catalysts.  
During the reaction carbonyl difluoride is splitt off and an ether is  
obtained in high yield which is free of carboxylic acid fluoride  
groups. Metallic silver is well suited as catalyst.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB A process is disclosed for changing the fluorine content of halogenated  
hydrocarbons containing from 1 to 6 carbon atoms, in the presence of a  
multiphase catalyst. The process involves producing the catalyst by  
heating a single phase solid catalyst precursor having the formula  
(NH.sub3).sub.6 Cr.sub.2-x M.sub.x F.sub.6 (where x is in the range of  
0.1 to 1 and M is at least one metal selected from the group consisting  
of Al, Sc, V, Fe, Ga and In) to about 400° or less to produce a  
multiphase composition wherein a phase containing crystalline M  
fluoride is homogeneously dispersed with a phase containing

chromium fluoride. Also disclosed are multiphase catalyst compositions consisting essentially of chromium fluoride and a crystalline fluoride of at least one metal selected from the above group (provided the atom percent of Cr is at least equal to the atom percent of the crystalline fluoride metals). Phases of the crystalline fluorides are homogeneously dispersed with phases of the chromium fluoride. Preparation of homogeneously dispersed multiphase catalyst compositions consisting essentially of fluorides of chromium and crystalline fluorides of at least one other metal selected from the above group (the atom percent Cr being at least equal to the atom percent of the other metal(s)) is also disclosed.

 SO PATENT ABSTRACTS OF JAPAN (CD-ROM), Unexamined Applications, Vol. 2004  
 AB PROBLEM TO BE SOLVED: To obtain hydrofluoroethers by a method which is free from inconvenience and limitation of conventional techniques.  
 SOLUTION: The hydrofluoroethers are expressed by formula (II):  
 $T-CF_X'-O-R<SB>f</SB>-CF_X-T'$  [T is  $CH<SB>3</SB>$ ; X and X' are identical to or different from each other, and each F or  $CF<SB>3</SB>$ ; T' is F, Cl, H, a 1-3C perfluoroalkyl,  $CH<SB>3</SB>$ ,  $CH<SB>2</SB>OH$ ,  $COCl$ ,  $CHO$  or  $CO<SB>2</SB>H$ ; and  $R<SB>f</SB>$  is a perfluoroalkylene or a perfluoropolyoxyalkylene]. The method for producing the hydrofluoroethers comprises reducing a compound corresponding to the product and having at least one  $-COCl$  end group by hydrogen gas in the presence of a platinum catalyst supported with a metal fluoride.

 SO PATENT ABSTRACTS OF JAPAN (CD-ROM), Unexamined Applications, Vol. 2004  
 AB PROBLEM TO BE SOLVED: To produce a perfluoropolyether functionalized by  $-COF$  groups, by using a peroxyperfluoropolyether as a starting material and reducing the starting material in the presence of a catalyst with a substantially quantitative conversion and a selectivity of  $\geq 95\%$ .  
 SOLUTION: In a method for producing the perfluoropolyethers, the peroxyperfluoropolyether corresponding to the product is reduced by hydrogen gas in the presence of the catalyst which is formed out of an VIII group metal supported on a metal fluoride compound at a temperature of  $20-140^\circ C$  under a pressure of 1-50 atm, so that the perfluoropolyethers expressed by formula (I):  $T-CF_X'-O-R<SB>f</SB>-CF_X-COF$  [T is  $COF$ , F or a 1-3C perfluoroalkyl; X and X' are each -F or  $-CF<SB>3</SB>$ ;  $R<SB>f</SB>$  is -  
 $(C<SB>2</SB>F<SB>4</SB>O)<SB>m</SB>(CF<SB>2</SB>CF(CF<SB>3</SB>O)<SB>n</SB>S<SB>B>(CF<SB>2</SB>O)<SB>p</SB>(CF(CF<SB>3</SB>O)<SB>q</SB>-; and  $(n+m+p+q)$  is 2-200] are produced.
